Las Vegas, NV - Open to relocation

Education

Oregon State University **2021**

- Bachelor of Science, Computer Science, 3.68 GPA

Work History

Software Engineer / Associate Software Engineer — Widen Enterprises **2021 - 2026**

Digital Asset Management and Product Information Management (DAM/PIM)

- Developed and maintained microservices within a distributed Java/TypeScript/ React platform consisting of 30+ apps and services handling millions of requests per day.
- Built and maintained Java/Spring Boot REST APIs and React/TypeScript user interfaces, collaborating across engineering, product, and support teams to deliver customer-facing functionality.
- Worked on software supporting DAM and PIM workflows, including digital content and media experiences; improved video and audio transcription and playback using Video.js, HLS, and content delivery through AWS CloudFront/S3.
- Eliminated a manual support workflow by independently designing and implementing full-stack self-service functionality with safeguards and automated tests, improving the customer experience while removing recurring manual intervention.
- Reduced database load and increased user clarity by adding validation and snackbar messaging to a frontend app, reducing total frontend requests sent.
- Eliminated unnecessary tripling of specific network requests by leveraging knowledge of frontend React render lifecycles.
- Extracted functionality from a 25-year-old monolithic application into new services and refactored functionality to be easier to extract.
- Debugged and resolved defects using Grafana, Sumo Logic, and observability tools.

Personal Projects **2026**

- Portfolio website containing my open-source applications and services
  - Features - Server-sent events, user analytics persistence, custom domain
  - Backend Java Spring Boot REST API and SDK with PostgreSQL and MongoDB databases
  - Integrations with OpenAI, Buildkite, Deployment, and database for visibility
  - RAG vector search chatbot and an internal MCP server

Skills

Languages: Java, TypeScript, SQL, Python, C++, HTML, CSS
Frameworks: Spring, Spring Boot, React, Hibernate
Testing: Playwright, Spock, Groovy, JUnit
CI/Deployment: Buildkite, Docker, Kubernetes, Maven, Gradle, JFrog, Stormforge
Cloud: AWS SQS, AWS S3, AWS Cloudfront, AWS RDS, DynamoDB, MongoDB
Misc: GitHub Copilot, Sumologic, New Relic, Grafana, Integrations, RAG, Vector Search
